Notes:

- (*1) - Each Dual Loop consumes another axis which should be defined as a dummy axis.
- (*2) - HSSI Networking for remote axes control and I/O extension.
- (*3) - HSSI Networking for I/O extension only. Each channel supports up to 64/63 additional I/O by four HSSI-I/O16 modules.
- All axes support: drive enable output and drive fault input (both are two-terminal, source or sink, opto isolation, 5V or 24V)
- All axes support: right and left safety inputs (two-terminal, source or sink, opto isolation, 5V or 24V).
- The controller supports one emergency stop input (two-terminal, source or sink, opto isolation, 5V or 24V) to terminate motion of all axes.
