

# Zero Backlash Speed Reducers

**onvio**

## PRECISE

- True Zero Backlash
- 400% Shock Load Capacity
- Exceptional Torsional Stiffness
- Rigid Bearing Construction
- Smooth, Quiet Operation

## INTELLIGENT

- Unique Cam Design Allows for More Than 50 Standard Ratios
- Same Low Profile Design Regardless of Ratio
- Integral Output Bearing

## DYNAMIC

- Balanced Cam for Higher Speeds
- Low Inertia
- High Safety Factor
- Input Speeds to 6000 rpm
- Great for High Reversing Applications

**PRECISE,**

**INTELLIGENT,**

**DYNAMIC**

Today's servo motors continue to provide higher speeds and increased torque capacity in each frame size. Dynamic performance, backlash and torsional stiffness become ever more crucial to motion control systems.

Onvio's Dojen™ cycloidal speed reducers provide the highest precision available offering TRUE ZERO BACKLASH, high torsional stiffness and unmatched positioning accuracy.

Onvio has manufacturing locations in the United States, Mexico, Germany, and Spain. By employing world class manufacturing standards we are able to control all aspects of the manufacturing process which means we will deliver the right product on time. You can count on it.

**onvio**

# Dojen™ Reducers

## Ultimate Performance

---

In applications that demand the greatest positioning accuracy, highest torsional stiffness, and lowest backlash, Onvio's Dojen™, with its compact axial design, is the only choice.

### Choose from the following options

---

#### Nine Frame Sizes

- Diameters from 4 inches up to 19 inches
  - Output Torques from 100 Lb-in to over 100,000 Lb-in
  - Input speeds to 8,000 RPM
- 

#### Widest Ratio Range Available

- 49 Ratios Available
  - 9:1 up to 256:1
  - Stacking stages not required
- 

#### Modularity

- Add Onvio's Right angle reducer for applications where axial space is crucial
  - Add a planetary stage and create ratios of 256,000:1 and beyond
  - Motor attaches easily using one of two available standard interface designs
- 

#### Input Configurations

- Hollow bore input shaft for close mounting motor
- Straight shaft for use with a timing belt
- Thru-holes for passing wires
- Optimal integrated brushless servo motor

# Zero Zero Backlash Speed Reducers Ultimate Performance Backlash

Onvio reducers are designed with cantilevered needle bearing cam followers and rollers—not with pins and bushings found in other cycloidal designs. This allows for a controlled pre-load between the cam and cam followers, assuring zero backlash. Pre-load is maintained throughout the design life of the reducer.

Every cam follower is in contact at all times, the load is equally shared. This guarantees consistently high torsional rigidity independent of load position.

With a high capacity output bearing and output flange, Onvio's cycloidal reducer can support most loads. Machine designs are simplified thus increasing reliability and reducing overall package size.

All steel construction for operation in wide range of temperatures.

One-piece dual reduction cam provides a wide range of ratios in a compact, low profile design.

Hollow bore input and clamp collar provide quick motor installation with no backlash.

Dynamically balanced counterweight for high speed input.

Integral four point contact ball bearing offers precision and high capacity.

Output flange design allows for direct connection to load, simplifying machine designs.

Full compliment needle bearing provides high capacity and assures zero backlash.

Improved spring loaded lip seal provides better sealing and can be operated in washdown.

+16:1	+38.5:1	-64:1	-104:1	-224:1
-24:1	-39:1	+65:1	-120:1	
-27:1	+40:1	+66:1	+121:1	

**Ratios:** Onvio's cycloidal reducer offers the most ratios with the widest range available. The unique cam design allows all ratios to be achieved without stacking stages, so the reducer's package size never changes.

The - and + indicators that precede the reduction indicate the rotation of the output shaft relative to the direction of the input shaft.

In negative ratios, the output shaft rotates opposite the input shaft.

In positive ratios, the output shaft rotates in the same direction as the input shaft.

# M-24 Series

## Dimensions

### Special features of the high torque M-24

- 3 times the power in the same diameter
- Full complement output bearing
- Higher ratios—up to 256:1
- Higher input speeds—up to 4500 rpm
- Greater positioning accuracy ( $\pm 330$  arc seconds)
- Thru-hole capability

## Additional Specification

### Back Driveability

Model No.	Breakaway Torque		Running Torque	
	Lb-In	Nm	Lb-In	Nm
M02	180	20	120	14
M03	750	85	600	68
M04	1800	203	1200	136
M05	3600	407	2400	271
M06	7200	814	4800	542
M24	7200	814	4800	542
M08	12600	1424	8400	949
M10	25200	2847	16800	1898
M12	61200	6915	40800	4610

Backdrivable Ratios: 10:1 to 90:1, 104:1 & 105:1

Locking Ratios\*: 99:1 to 256:1

\* Locking ratios are not designed as a safety stop. A brake should be used for inertial loads and in applications where gravitational loads must be held.

### Back Driveability

One of the unique features of Dojen technology is its ability to be used as a speed increaser as well and as a speed reducer. This "backdriveability" is a necessary feature in reduction applications that have high inertial loads.

Tare Torque: Tare torque is the friction from the preload, bearings, grease, etc. The tare torque is the amount of torque it takes to continuously operate the reducer at 1,500 RPM input speed.

## Motor Bearing Dynamic Radial Loads

Onvio's unique collet input shaft gives designers the shortest axial package available. The motor shaft is close coupled with the reducer input shaft. When this design is used, the motor bearing is very close to the reducer's input shaft. We remove the rear support bearing in order to avoid too many bearings in a row. Under load, the motor bearing will see a radial load from the reducer input. The following chart provides the radial load at rated output torque. The load varies with the amount of output torque and the relationship is linear.

### Dynamic Radial Loads for Standard Ratios

Ratio	M02		M03		M04		M05		M06		M24		M08		M10		M12
	Lb	N	Lb	N	Lb	N	Lb	N	Lb	N	Lb	N	Lb	N	Lb	N	
25	53	236	172	765	218	970	351	1561	565	2513	N/A	N/A	709	3154	1140	5071	Consult
55	30	133	85	378	109	485	171	761	272	1210	N/A	N/A	339	1508	540	2402	Onvio
105	20	89	50	222	65	289	89	396	156	694	N/A	N/A	192	854	302	1343	
225	14	62	30	133	39	173	57	254	88	391	N/A	N/A	106	471	162	721	

If the motor bearing can not support the reflected radial load, Onvio offers an added support bearing and male input shaft. Please refer to page 10 for standard dimensions.

Contact Onvio application engineering for additional ratios or for assistance.

# Efficiency, Lubrication, and Temperatures

## Grease Chart

	Standard Grease	Extreme Cold Temps	Extreme High Temps
Model 02	Shell Alvania II	Amoco Supermil <sup>1</sup>	Magnalube G1/3 <sup>1</sup>
Model 03	Shell Alvania EP1	Amoco Supermil <sup>1</sup>	Magnalube G1/3 <sup>1</sup>

Model 10	Shell Alvania EP2	Amoco Supermil <sup>1</sup>	Magnalube G1/3 <sup>1</sup>
Model 12	Shell Alvania EP2	Amoco Supermil <sup>1</sup>	Magnalube G1/3 <sup>1</sup>

<sup>1</sup> May require derating the reducer. Contact our application department for details.

Onvio also offers specialty lubrication for use in semiconductor applications, food processing, etc.

Contact our application department for details.

## Lubrication

The Dojen is grease lubricated and sealed for life. However, in some high cycle applications or in environments that can prematurely cause lubricant to breakdown, we recommend purging old grease with fresh new grease. The reducer is equipped with grease ports on the outer diameter. Contact Onvio customer service for lubrication procedures and available equipment.

## Standard Operating Temperatures

For normal, steady-state operation: 32°F to 150°F

Requires heatsinking/cooling: 150°F to 212°F

# Input Shafts

## Collet Input Shaft

### Features

- Perfect for direct mounting in close quarters to a servo motor.
- No keyways, no backlash.
- Specify motor shaft diameter when ordering.
- Motor sleeves provided for any motor shaft diameter smaller than the maximum shaft diameter.
- Eliminates costly couplings.

### Collet Input (For direct coupling of motor shaft)

Model No.	Maximum Shaft Dimensions				Motor Sleeve Dimensions <sup>1</sup>

## Straight Input Shaft

### Features

- Has fully supported input shaft.
- Removes radial load from motor bearings.
- Ideal for shaft-to-shaft couplings, pulleys, gears, etc.
- Allows reducer to be used as a speed increaser in specified ratios.
- Both metric and inch sizes.
- Thru-holes available for routing wires, etc.

### Straight Shaft Input

M12								

## Features

- Bolts directly to output face.
- Ideal for shaft-to-shaft couplings, pulleys, gears, etc.
- Available in aluminum or steel.
- Nickel plating available for wash-down compatibility.
- Both metric and inch sizes.
- Thru-holes available for routing wires, etc.

## Additional Options

- Face mounted pulleys
- Large diameter thru-holes for passing wires, coolant lines, etc.
- Full complement output bearing that can handle even higher loads
- Eccentric pilot for installation and preload of rack and pinion drives
- Nickel plated finish for use in high corrosive and vacuum environments
- Custom input and output shafts
- Stacked reducers for ratios over 50,000:1

# Motor Interfaces

Onvio offers three standard types of servo flanges that can be machined for use with almost any servo or stepper motor.

They include square flanges, round flanges, and foot mounts. They can be made of either steel or aluminum.

These flanges are used to interface our speed reducer to various brands of motors. Here's a partial list of brands.

<b>Allen Bradley</b>	<b>Lenze</b>
<b>Baldor</b>	<b>Mavilor</b>
<b>Control Technique</b>	<b>MCG</b>
<b>Danaher</b>	<b>Moog</b>
<b>Electrocraft</b>	<b>Oriental Motor</b>
<b>Emerson</b>	<b>Pacific Scientific</b>
<b>Fanuc</b>	<b>Parvex</b>
<b>Global Servos</b>	<b>PMI Motion Technologies</b>
<b>Giddings &amp; Lewis</b>	<b>Reliance Electric</b>
<b>IMS</b>	<b>Rockwell Automation</b>
<b>Indramat</b>	<b>Siemens</b>
<b>Industrial Drive</b>	<b>Yaskawa</b>
<b>Infranor</b>	
<b>Kollmorgen</b>	

One of our applications engineers will be pleased to provide you with the proper CAD drawing— by mail, fax, CD, or over the internet.

Warning: Never loosen the stud nuts of a Onvio reducer. They are factory precision set. Attempting to adjust these nuts in the field will void the warranty.

## Preparation

1. Dowel pinning the load to the Onvio reducer and the mounting structure to the reducer is highly recommended to reduce the hysteresis lost motion. Contact Onvio engineering for recommendations.
2. Concentricity between pilots should be within .002" TIR.
3. Flatness between mating components should be within .0005 TIR, and be free of burrs.
4. Orientation of grease ports should be considered to allow for ease of relubrication.

## Installation

**Note:** Use Loctite on all hardware.

1. Insert allen wrench into the collet collar before sliding the motor shaft into the input shaft of the reducer. This will cause proper positioning of the collar for later tightening.
2. Tighten flange bolts of the motor to the flange and to the reducer before tightening collar. Use a crossing pattern when tightening all bolts to minimize axial load on the input shaft.
3. Tighten collar according to recommended torque specs above.
4. The load coupling can be trued up, match machined, and pinned with the output shaft to minimize position error.

## Easy to Order

Onvio's unique interface design offers an oversized pilot and slotted holes. The motor bearing is free of side load, resulting in longer life and better performance.

Simplified ordering and shortened delivery time because Onvio offers standard flanges for almost any motor. Match the motor mounting dimensions with the proper flange and insert the corresponding letter into the catalog number when ordering.

# Additional Reducer Products

**Planetary**

**Right Angle**

**Power Pulley**

**Timing Pulleys**

## Planetary

Onvio's revolutionary, modular approach to gearbox design has resulted in three unique families of products that offer the right performance and value for any application. The modular concept allows Onvio to provide complete OEM solutions quickly and economically.

## Right Angle

In keeping with Onvio's modular concept, the right angle module is a self contained, helical bevel stage that can bolt directly on to all of Onvio's AP series products. This module provides ratios of 1:1, 3:1 and 5:1 as a standalone gearbox or attaches to our AP gearbox for ratios of 100:1.

## Power Roller

Onvio's new power roller incorporates a servo motor or an induction motor to match any precision requirement. Our modular designs can be supplied in widths from .5 meters up to more than 1 meter. Onvio's power roller provides torques of more than 30 Nm with linear speeds of up to 3.1 meters/second.

## Power Pulley

Onvio has combined the transmission strength of a speed reducer and the compact size of a pulley in our revolutionary gearbox in a pulley. Some of the advantages include 30% lower system cost due to fewer components, as well as higher reliability and better dynamic response.

**Power Roller**

## Timing Pulleys

Onvio manufactures a complete line of timing pulleys for use in linear applications. Pulleys are made of aluminum, steel or stainless steel and can be supplied as complete pulley assemblies, finished pulleys or bar stock.

**For questions on any of these products, contact Onvio at 1-866-685-0404 or by email at [contact@onviollc.com](mailto:contact@onviollc.com).**
