

Frequency inverter

Versatile, robust, tried-and-tested

Lenze

Our principles.

Do you want to effectively and simply produce your machine and plant concepts or optimise existing concepts and thereby cut costs? Then Lenze is the partner for you. Drive and automation technology is what we do and have been doing for more than 60 years.

Drive and automation technology set in motion by Lenze – for example in logistics centres, in the textile and printing industry, in the automotive industry or as the driving force behind robots.

Lenze | about us

We can offer you automation solutions, including control, visualisation and drive technology, from a single source. Our drive systems will improve the performance of your machines. From project planning to commissioning, we have the know-how. Our international sales and service network can provide you with expert help and advice at any time.

Cut your process costs and increase your ability to compete. Let us analyse your drive technology tasks and support you with made-to-measure solutions. We can take an integrated approach to projects thanks to the scalability of our products and the scope of the overall portfolio. We can get the best from your machines and systems.

At your side all over the world – with thorough and professional support from our motivated team.

About this catalogue

This catalogue contains all components of the frequency inverter product range.

For some components the "arrow" symbol appears together with an identifier printed in bold. This identifier can be retrieved directly in the electronic catalogue. The catalogue can be found online at: www.lenze.de/dsc

Inverters and accessories

smd – for simple applications

Do you use digital and analogue inputs, preset speeds or a display with keypad for your applications? Is space in your control cabinet tight and is your budget tight too? The smd frequency inverter is a zero-compromise solution. The smd covers a power range of 0.25 ... 22 kW and handles everything you could possibly need of a universal use frequency inverter today. A large range of applications can be easily solved using clear functions.

All you need is three on-board operator buttons and a handful of parameters – commissioning is child's play. The parameter setting can be saved on one single chip. The Electronic Programmable Module (EPM) is a pluggable memory chip designed especially for the smd. The EPM allows you to transfer set drive data to other frequency inverters in the series as often as you want. Modified drive parameters are also handled in a matter of seconds by simply replacing the EPM on the front of the frequency inverter.

Programming is undertaken on the inverter itself or via a battery-operated EPM (Electronic Programmable Module) programming unit. Configurations can then be conveniently produced or edited offline. The device saves up to 30 different drive programs as a file. You can copy from EPM to EPM, file to EPM or write the EPM back to a file in a couple of seconds at the push of a button.

The frequency inverter has integrated motor overload protection. To achieve this a microprocessor calculates the motor load regardless of output speed, protects the motor and makes additional hardware superfluous.

The function and number of control terminals corresponds to the usual Lenze standard:

- ▶ start-stop function
- ▶ analogue setpoint selection with voltage or current freely
- ▶ programmable inputs
- ▶ freely programmable relay output

The smd has a current limitation with reduced frequency for stable operation, a clearly legible LED display and scope for low-noise operation thanks to an adjustable switching frequency of up to 10 kHz.

Functions and features

smd frequency inverter

Accessories

Brake modules

An external brake resistor is needed to decelerate larger moments of inertia or in the event of longer operations in generator mode. It converts braking energy into heat.

- ▶ Brake modules and/or brake choppers are available for all smd with three-phase mains supply.
- ▶ A brake module is the combination of a brake chopper and a brake resistor in a housing

RFI filter

RFI filters are used to observe EMC requirements as stated in European standard EN 61800-3. This lays down EMC requirements for electric drive systems in various categories.

Category C1 applies in public networks (residential areas). In terms of limit values, category C1 corresponds to class B as laid down in EN 55011.

Category C2 applies in industrial premises, but also in residential areas if deemed appropriate by the user. In terms of limit values, category C2 corresponds to class A as laid down in EN 55011.

RFI filter

- ▶ RFI filters are available for all smd with three-phase mains supply (category C2 with max. 10 m of shielded motor cable)
- ▶ The filters are designed as footprint filters.
- ▶ Single-phase smd (ESMD□□□□2SFA types) are fitted with integrated RFI filters. (Category C2 with max. 10 m shielded motor cable).

External keypad

Keypad with IP65 degree of protection – for example for installation in a control cabinet door. The keypad has a panel of keys for the start/stop function, clockwise/counter-clockwise rotation, speed selection and an LED display. The keypad can be used with 400V devices.

External keypad

Design	Product key
Keypad	ESMD01KP

EPM - Programming unit and memory chip

The EPM programmer allows configurations to be conveniently produced or edited offline. The device saves up to 30 different drive programs and is perfectly suited to copying processes. The complete frequency inverter configuration is stored on the pluggable memory chip. Simply replace the module and you can continue with another drive task right away.

smd frequency inverter

Notes

About this catalogue

This catalogue contains all frequency inverter components. The corresponding automation components can be found in the PC-based Automation catalogue.

For some components the "arrow" symbol appears together with an identifier printed in bold. This identifier can be retrieved directly in the electronic catalogue. The catalogue can be found online at: www.lenze.de/dsc

Inverters and accessories

8200 vector frequency inverter

Product information

8200 vector – for standard applications

The concept of the 8200 vector frequency inverter is based on a modular system of components adjusted to each other. If combined with a Lenze geared motor or a Lenze three-phase AC motor, you can produce electronic variable speed drives for a wide range of applications in the 0.25 ... 90 kW power range.

The option of 'bookcase' mounting

permits a space-saving installation in the control cabinet. Installation costs are reduced using integrated filters (optional).

Flexible

The modular structure allows you to optimise the inverters to your application, making cost-effective drive solutions possible while maintaining high performance levels. Regardless of whether you opt for "stand alone" inverters with potentiometer-based setpoint selection or inverters networked in a bus system – the functionality of the inverter can be adapted to your application.

Adaptable

The selectable form of the V/f characteristic allows the frequency inverters to be adapted to loads with torque requirements rising in a constant or quadratic manner. The integrated flying restart circuit means that a drive can be easily restarted when the shaft is still turning.

Energy-saving

The power level is adapted such that the inverter is only driven to suit the current demand for torque/power.

Immediately ready for operation

The frequency inverters are preset for standard use. Amongst other things, parameters are set for:

- ▶ controlled acceleration and deceleration using set acceleration and deceleration times
- ▶ assignment of inputs and outputs with standard functions.

Simple

This series of inverters are characterised by simple operability and handling while also offering high levels of functionality. A clear menu structure and user-guided commissioning thanks to the Global Drive Control easy (GDC easy) parameterisation software makes rapid frequency converter parameter setting and diagnostics possible. GDC easy is free of charge and can be downloaded from www.Lenze.de.

Clear

The XT keypad is also available for operation. Users can quickly access all inverter parameters in the clear menu structure using the 8 keys and a text display. The XT keypad is also used for status display, error diagnosis and, thanks to its integrated memory, for transferring settings to other inverters.

8200 vector – for standard applications

The right setpoint source for every requirement

- ▶ via setpoint potentiometer to the control terminals
- ▶ via master voltage or master current to the control terminals
- ▶ via digital frequency input
- ▶ via an operator module
- ▶ via a bus module from a host system

Communication-capable

In communication with a host system, inverters can be incorporated using plug-on bus modules. Virtually all common field bus systems are available (CAN, CANopen, PROFIBUS, INTERBUS, DeviceNet, AS interface and ETHERNET Powerlink).

Reliable

An adjustable slip compensation balances load-related speed variations without costly speed feedback. The maximum current limiting function ensures stable operation under static and dynamic loads. A PTC resistor can be connected to protect the motor.

Used around the world

Thanks to the huge mains voltage range of up to 500 V (+10%), you don't need to worry about where in the world your machine is supplied. And the 8200 vector series is of course certified in line with international standards .

8200 vector frequency inverter

Product information

Functions and features

Control modes/motor control	V/f control (linear or quadratic) Zero-sensor vector control
Basic functions	Freely assignable user menu 4 freely programmable parameter sets (can be swapped over online) Fault history buffer DC brake function Flying restart with coasting motor S-ramps for smooth acceleration Max. output frequency 650 Hz Fixed frequencies Masking frequencies PID controller Freely configurable inputs and outputs Level inversion
Monitoring and protective measures	Short circuit Earth fault Overvoltage Motor stalling Motor phase failure detection Load rejection/V-belt monitoring I ² x t-Motor monitoring Motor overtemperature (input for PTC or thermal contact)
Diagnostics Status displays	2 LEDs
Braking operation Brake chopper Brake resistance	0.25 ... 11 kW integrated; 15 ... 90 kW external External

Control connections

The 8200 vector receives digital and analogue inputs and outputs through an I/O function module. These are used to control the inverter and/or incorporate it in automation and control concepts.

Communication with a host system can also be established and matched to the application using a plug-in communication module. This ensures great flexibility for various drive and automation tasks (bus and I/O mixed operation).

You can select from two I/O function modules:

- ▶ standard I/O PT for standard applications
- ▶ application I/O PT for challenging applications.

The function module is integrated on the bottom slot of the 8200 vector. There is a second slot for a bus-function module on the 8200 vector in the 15 to 90 kW power range. This allows the standard I/O PT to be combined with a bus function module; diagnostics with an operating module is for example possible at the same time.

Design	8200 vector with standard I/O PT ¹⁾	8200 vector with application I/O PT ¹⁾

Brake choppers and brake resistors

An external brake resistor is needed to decelerate larger moments of inertia or in the event of longer operations in generator mode. It converts braking energy into heat.

The brake resistors recommended in the table are designed for around 1.5 times the regenerative power for a cycle time of 15/135 s (brake/pause). The brake resistors are fitted with a thermostat (potential-free NC contact).

► The ERBD... brake resistors are tested according to UR

Brake resistance ERBM...(IP20)

8200 vector frequency inverter

Accessories

Mains chokes

A mains choke is an inductance which is switched in the inverter's mains cable. Using a mains choke delivers the following benefits:

- ▶ **less system perturbation:**
the curved shape of the mains current approaches a sine shape.
- ▶ **reduction in effective mains current:**
reduction in mains, cable and fuse load.

There are no limitations on using a mains choke together with RFI filters and/or motor filters.

Please note:

- ▶ when using a mains choke, the mains voltage on the inverter input is reduced slightly – typical voltage drop on the mains choke at the rated point approx. 5%.
- ▶ A mains choke or mains filter always has to be used for some inverters because otherwise the permissible rated data for the components used may be exceeded as a result of excess mains currents.
- ▶ The following assignment applies to operation with rated power.

Motor power (asynchronous motor, 4-pole)	Mains voltage	Product key		Mains choke data

RFI filter

RFI filters are used to observe EMC requirements as stated in European standard EN 61800-3. This lays down EMC requirements for electric drive systems in various categories.

Category C1 applies in public networks (residential areas). In terms of limit values, category C1 corresponds to class B as laid down in EN 55011.

Category C2 applies in industrial premises, but also in residential areas if deemed appropriate by the user. In terms of limit values, category C2 corresponds to class A as laid down in EN 55011.

The 8200 vector with integrated RFI measures satisfies the standard EMC requirements. In the event of more stringent requirements of the noise emission, which cannot be achieved with the RFI measures integrated in the inverter, external filters can be used in the power range of up to 11 kW.

- ▶ Important: only use RFI filters in combination with 8200 vector without integrated filters! (E82EV□□□K□C200)
- ▶ The motor cable lengths stated are maximum values and depend on the inverter type and switching frequency.

Three different filter types are available:

- ▶ LL (Low Leakage) RFI filter with a discharge current < 3.5 mA over 5 m of shielded motor cable allows for installation in portable systems (category C1 with 5 m of shielded motor cable).
- ▶ SD (Short Distance) RFI filter with low discharge current, e.g. for operation on a 30 mA earth-leakage circuit-breaker with 10 m of shielded motor cable (guide value) (category C1 with 20 m of shielded motor cable, category C2 with 20 m of shielded motor cable)
- ▶ LD (Long Distance) RFI filter for operation with long motor cables (category C1 with 50 m of shielded motor cable, category C2 with 50 m of shielded motor cable).

The LD RFI filter and motor filter combination ensures compliance with category C1 with 100 m of shielded motor cable.

Mains filter

A mains filter is a mains choke and RFI filter combination in a housing. It is used to comply with category C1 (with 10m of shielded motor cable) and C2 (with 50m of shielded motor cable) according to EN 61800-3.

Furthermore, a mains filter achieves the efficiency of a mains choke which also reduces the r.m.s. value of the mains current. Mains filters are available in a power range of 15 ... 90 kW.

- ▶ Important: Only use the mains filter in combination with E82EV□□□K4B2□1 type 8200 vectors! The 8200 vector frequency inverter is also available with a fully fitted mains filter (types: E82EV□□□K4B3□□).
- ▶ The filters are designed as footprint filters.
- ▶ Built-on mains filters are also available (category C1 with 50 m of shielded motor cable)
- ▶ When mounting the inverter in cold plate technology, only built-on mains filters can be used for interference suppression.
- ▶ The motor cable lengths stated are maximum values and depend on the inverter type and switching frequency.
- ▶ The following assignment applies to operation with rated power.

Motor power (asynchronous motor, 4-pole)	Mains voltage U_{Netz} [V]	Product key		Mains filter data

Motor filter

You use motor filters to reduce the load on the motor winding and to reduce capacitive charge/discharge currents with long motor cables. Motor filters ensure reliable drive operations with up to 100m of shielded or 200m of unshielded motor cable.

- ▶ Motor filters combined with a "Long Distance" RFI filter allow category C1 to be observed with a motor cable of up to 100m and category C2 with a motor cable of up to 200m in the 0.25 to 11kW power range.
- ▶ The voltage drop on the motor filter with rated current and a frequency of 50Hz is typically around 3% of the max. output voltage of the inverter.
- ▶ Observe the operating conditions of the motor filter.

Motor filter

A motor filter is needed:

- ▶ as of 50m of shielded or 100m of unshielded motor cable (regardless of observance of EMC requirements)
- ▶ When using motors whose insulation systems are not suitable for inverter operation.

Keypad and diagnosis terminal

The keypad is provided to visualise the operating parameters and set parameters for the inverter. The keypad is plugged onto the front of the inverter and is also used for the status display, error diagnosis and, with integrated memory, to transfer parameters to other inverters.

Diagnosis terminal with XT keypad and connection cable

As an alternative, diagnosis terminals with integrated keypads are available for visualising the operating parameters and inverter parameter setting

Design		Features	Slot	Product key
Keypads and accessories				
Keypad XT		<ul style="list-style-type: none"> ▶ Password protection ▶ Plain text display ▶ Predefined basic configurations ▶ User-specific menus ▶ Suitable for the 8200 vector and 9300 inverters series ▶ IP20 degree of protection 	AIF	EMZ9371BC

Connection cable ¹⁾		▶ Connection cable, 2.5 m		E82ZWL025
		▶ Connection cable, 5 m	E82ZWL050	
		▶ Connection cable, 10 m	E82ZWL100	

¹⁾ Required for use of diagnosis terminal or control cabinet installation kit.

²⁾ Needed when installing keypad in a control cabinet door.

PC interface (RS232)

Using a PC and the LECOM-A (RS232) communication module, the inverter can be operated and diagnosed (as an alternative to using a keypad) via the convenient and free of charge "Global Drive Control easy" parameter setting/operating software. A PC system cable is used to link to the PC.

PC interface (RS232)

Design	Features	Slot	Product key
LECOM-A communication module 	<ul style="list-style-type: none"> ▶ 3 LED for communication status display ▶ RS 232 ▶ Electrically isolated from the bus ▶ No external voltage supply required 	AIF	EMF2102IBC004
PC system cable	▶ PC system cable 0.5 m		EWL0048
	▶ PC system cable 5 m		EWL0020
	▶ PC system cable 10 m		EWL0021

→ Data sheet on PC interface (RS232)
DS_ZB_EMF_0001
 Available for download at www.lenze.de/dsc

PC system bus adapter

Alternatively in a CAN network, operation and diagnostics with the PC can also be undertaken using an inverter CAN interface. The PC system bus adapter is plugged onto the PC's parallel interface or USB connection. The corresponding drivers are installed automatically. Depending on version, the adapter's voltage supply comes via the PC's DIN connection, PS2 connection or USB connection.

EMF21731BV003 adapter

Advantage:

- ▶ operation, parameter setting and diagnostics in parallel to plugged keypad
- ▶ Several inverters can be addressed from one point in networked systems (remote parameterisation)

Design	Features	Product key
PC system bus adapter	▶ Voltage supply via DIN connection on PC	EMF21731B
	▶ Voltage supply via PS2 connection on PC	EMF21731BV002
	▶ Voltage supply via PS2 connection on PC	EMF21731BV003
	▶ Electrically isolated from the bus	
	▶ Voltage supply via USB connection on PC	EMF21771B
▶ Electrically isolated from the bus		

Setpoint potentiometer

The speed can be selected (setpoint selection or selection of field frequency) using an external potentiometer. The setpoint potentiometer is connected to the analogue input terminals to this end. A scale and rotary knob are also available.

Setpoint potentiometer with scale and rotary knob

Design	Product key
10 kOhm/1 Watt potentiometer	ERPD0010K0001W
Rotary knob, 36 mm diameter	ERZ0001
Scale 0 ... 100 %, 62 mm diameter	ERZ0002

Plug connector for function modules

The plug connector ensures that the function module makes contact with the inverter. The scope of supply for the inverter includes one plug connector. These plug connectors can be ordered separately later on by way of spares.

Plug connector for function modules

Design	Product key
8 plug connectors for function module	E82ZJ011

DIN rail mounting

Up to 2.2kW the 8200 vector frequency inverters can be secured on DIN rails (35 x 7.5 or 35 x 15) with a special support. At 1.5 and 2.2kW, mounting on 2 DIN rails with 2 fastenings is also possible.

Design	Product key
DIN rail mounting 0.25 ... 2.2 kW	E82ZJ002

Brake switch

The brake switch comprises a rectifier and an electronic circuit breaker for switching an electromechanical brake. The brake switch is fitted in the control cabinet using two screws. It is controlled using one of the inverter's digital outputs.

Design	Features	Product key
	Brake switch	
Half-wave rectification	<ul style="list-style-type: none"> ▶ Input voltage: AC 320 ... 550 V ▶ Output voltage: DC 180 V (at AC 400 V), DC 225 V (at AC 500 V) ▶ Max. brake current: DC 0.61 A ▶ Degree of protection: IP00 	E82ZWBRE
Bridge rectification	<ul style="list-style-type: none"> ▶ Input voltage: AC 180 ... 317 V ▶ Output voltage: DC 205 V (at AC 230 V) ▶ Max. brake current: DC 0.54 A ▶ Degree of protection: IP00 	E82ZWBREB

8200 vector frequency inverter

Accessories

Shield connection

Shield connections are available for quick and easy mounting of shielded cables according to EMC. The scope of supply includes a shield sheet and clips. The shield sheets are angled such that the cables can be guided into the cable duct without too great a bend.

Shield connection

Design	Product key
0.25 ... 0.37 kW control cable shield connection	E82ZWEM1
0.55 ... 2.2 kW control cable shield connection	E82ZWEM2
3.0 ... 11 kW control cable shield connection	E82ZWEM3
15 ... 30 kW power connection shield connection; cable diameter 15 ... 28 mm	EZZ0017

PTC kit

When using unshielded PTC cables in the motor cable, the PTC kit must be used. The scope of supply includes a PTC module alongside the shield connection. The PTC module takes the place of a ferrite core installed in the PTC cable. Prepared terminal connections allow the PTC module to be installed quickly and easily.

PTC kit

Design	Product key
PTC kit for 0.25 ... 0.37 kW	E82ZPE1
PTC kit for 0.55 ... 2.2 kW	E82ZPE2
PTC kit for 3.0 ... 11 kW	E82ZPE3

8200 vector frequency inverter

Notes

About this catalogue

This catalogue contains all frequency inverter components. The corresponding automation components can be found in the PC-based Automation catalogue.

For some components the "arrow" symbol appears together with an identifier printed in bold. This identifier can be retrieved directly in the electronic catalogue. The catalogue can be found online at: www.lenze.de/dsc

Inverters and accessories

9300 vector frequency inverter

Product information

9300 vector – for challenging applications

Lenze frequency inverters are used in a large number of sectors and applications for electronically adjusting the speed of three-phase asynchronous motors. We offer uniform standard products with flexible scope for use, quick and easy commissioning, reliability and of course high quality. The 9300 vector is a vector-controlled frequency inverter, perfectly equipped for even challenging applications. Excellent drive behaviour, even if not using speed feedback, and undreamed-of scope for solving closed loop and feedback control tasks are just some of the features offered by these frequency inverters. The 9300 vector is typically used in for example extruders, winders, pumps, compressors, fans, blowers, sawing/cutting drives, textile machines and conveyors.

Simple connection

Pluggable screw terminals for digital/analogue inputs and outputs (removable terminal blocks) and Sub-D sockets for feedback and digital frequency signals make possible quick and easy connection of control signals with protection against polarity reversal. All connections can be easily accessed.

Adaptable

The selectable form of the V/f characteristic allows the frequency inverters to be adapted to loads with torque requirements rising in a constant or quadratic manner. The integrated flying restart circuit means that a drive can be easily restarted when the shaft is still turning.

CE conformity

It goes without saying that frequency inverters of the 9300 vector control range satisfy EC directives:

- ▶ CE conformity according to the Low-Voltage Directive
- ▶ CE conformity according to the electromagnetic compatibility directive for a typical drive configuration with frequency inverter

Energy-saving

The power level is adapted such that the inverter is only driven to suit the current demand for torque/power.

Immediately ready for operation

The frequency inverters are preset for standard use. Amongst other things, parameters are set for:

- ▶ controlled acceleration and deceleration using set acceleration and deceleration times
 - ▶ assignment of inputs and outputs with standard functions
- Predefined basic configurations are available for challenging applications (e.g. dancer position control, torque control, traversing control, digital frequency coupling).

User-friendly

A large number of subject- and application-oriented menus simplify the process of solving drive tasks and finding the parameters required for this. Example: the key settings for standard applications can be undertaken using the 32 parameters available under the "user menu". The "user menu" can however also be individually modified and set up with frequently used parameters.

9300 vector – for challenging applications

Effortless operations

The 9300 vector frequency inverter can be quickly and easily adapted to individual requirements using the PC and "Global Drive Control" parameter setting/operating software. Simple dialogues (e.g. short setup) ensure a good overview. Alternatively, a plug-on operating keypad is also available.

The right setpoint source for every requirement

- ▶ via a setpoint potentiometer to the control terminals
- ▶ via master voltage or master current to the control terminals
- ▶ via digital frequency input
- ▶ via an operating module
- ▶ via a communication module from a host system

Communication-capable

In communication with a host system, inverters can be incorporated using plug-on communication modules:

- ▶ LECOM-A/B (RS232/485)
- ▶ LECOM-LI (optical fibre)
- ▶ INTERBUS
- ▶ PROFIBUS-DP
- ▶ DeviceNet
- ▶ CANopen
- ▶ ETHERNET Powerlink

Reliable

An adjustable slip compensation balances load-related speed variations without costly speed feedback. The maximum current limiting function ensures stable operation in all operating points under static and dynamic loads. A PTC thermistor can be connected to protect the motor.

System bus interface (CAN) by default

A bus connection between several Lenze inverters and automation components, for example, can therefore be established at a low wiring cost.

Single-loop and feedback control for free

More than 100 function blocks e.g. PID controllers, flip flops, counters, comparators, delay elements, logic and mathematical functions can be freely interconnected and made available to the user. In a similar way to a PLC, the 9300 vector can then handle other closed loop and feedback control functions in addition to the actual drive task. Master controls can be relieved or even removed altogether – and all for free. The fact that the function block structure can be freely interconnected also means that the 9300 vector can be easily integrated in machine, system and control concepts without any compromises having to be made.

The Lenze geared motor – an ideal partner

The technology behind Lenze geared motors is coordinated to the 9300 frequency inverters. Commissioning is incredibly simple because the frequency inverter is coordinated to the motor data – there is no need to set parameters for the motor data.

9300 vector frequency inverter

Brake choppers and brake resistors

An external brake resistor is needed to decelerate larger moments of inertia or in the event of longer operations in generator mode. It converts braking energy into heat.

Brake resistance ERBM...(IP20)

9300 vector frequency inverter

Accessories

Mains chokes

A mains choke is an inductance which is switched in the inverter's mains cable. Using a mains choke delivers the following benefits:

- ▶ **less system perturbation:**
the curved shape of the mains current approaches a sine shape.
- ▶ **reduction in effective mains current:**
reduction in mains, cable and fuse load.

Mains choke

There are no limitations on using a mains choke together with a motor filter.

Please note:

- ▶ when using a mains choke, the mains voltage on the inverter input is reduced slightly – typical voltage drop on the mains choke at the rated point approx. 5%.
- ▶ A mains choke or mains filter always has to be used for some inverters because otherwise the permissible rated data for the components used may be exceeded as a result of excess mains currents.
- ▶ The following assignment applies to operation with rated power.

Motor power (asynchronous motor, 4-pole)	Mains voltage	Product key		Mains choke data		
		Inverter	Mains choke	Rated current	Dimensions	Mass
P_N [kW]	U_{Netz} [V]			I_N [A]	H x B x T [mm]	m [kg]

Mains filter

A mains filter is a mains choke and RFI filter combination in a housing. Mains filters offer the same advantages as a mains choke and are also used to comply with interference voltage categories according to European standard EN 61800-3. A distinction is made in this legislation between category C1 and category C2.

Category C1 is used in public networks (residential areas). In terms of limit values category C1 corresponds to class B as laid down in EN 55011.

Category C2 is used in industrial premises, but also in residential areas if deemed appropriate by the user. In terms of limit values category C2 corresponds to class A as laid down in EN 55011.

Mains filter A, mains filter B and other mains filters are available for 9300vector inverters for compliance with interference voltage categories.

The choice of components depends on the motor cable length and interference voltage category required.

- ▶ see tables of data
- ▶ Category C2, cable length up to 5 m --> mains filter A
- ▶ category C2, cable length up to 50 m --> mains filter
- ▶ category C1, cable length up to 10 m --> mains filter
- ▶ category C1, cable length up to 50 m --> mains filter B

Mains filter A, C2 up to 5m

Mains filter A is used to operate 9300 inverters in industrial areas, e.g. on industrial networks. With mains filter A, EN 61800-3 category C2 up to 5m motor cable length is complied with.

As well as reducing the cable-linked interference voltage, a mains filter achieves the efficiency of a mains choke which also reduces the r.m.s. value of the mains current. Mains chokes or mains filters always have to be used for some controllers because otherwise the permissible rated data of the components used may be exceeded as a result of mains currents.

- ▶ See rated data

Mains filters are available in a power range of 0.37 ... 90kW.

- ▶ The filters are designed as add-on filters.
- ▶ The motor cable lengths stated are maximum values and depend on inverter type and switching frequency
- ▶ The following assignment applies to operation with rated power.

Mains filters A and B

Motor power (asynchronous motor, 4-pole)	Mains voltage	Product key		Mains filter A data

9300 vector frequency inverter

Accessories

Mains filter B, C1 up to 50 m

Mains filter B is used to operate 9300 controllers on public supply networks or in industrial areas. With mains filter B, EN 61800-3 category C1 up to 50m motor cable length is complied with .

- ▶ The filters are designed as add-on filters.
- ▶ The motor cable lengths stated are maximum values and depend on inverter type and switching frequency
- ▶ The following assignment applies to operation with rated power.

Motor power (asynchronous motor, 4-pole)	Mains voltage	Product key		Mains filter B data			
		Inverter	Mains filter	Rated current	Max. cable length C1	Dimensions	Mass

Mains filter, C1 up to 10 m and C2 up to 50 m

The mains filter is used for inverters with a 15 ... 90kW power in order to operate with up to a 50m motor cable length in industrial areas or with up to a 10m motor cable length on public networks. Mains filters correspond to category C1 EN 61800-3 up to 10m motor cable length and category C2 EN 61800-3 up to 50m motor cable length.

- ▶ The filters are designed as footprint filters.
- ▶ Built-on mains filters are also available (category C1 with 50m of shielded motor cable)
- ▶ When mounting the inverter in cold plate technology, only built-on mains filters can be used for interference suppression.
- ▶ The motor cable lengths stated are maximum values and depend on the inverter type and switching frequency.
- ▶ The following assignment applies to operation with rated power.

Motor power (asynchronous motor, 4-pole)	Mains voltage	Product key		Mains filter data		
		Inverter	Mains filter	Rated current	Dimensions	Mass
P_N [kW]	U_{Netz} [V]			I_N [A]	H x B x T [mm]	m [kg]

Motor filter

You use motor filters to reduce the load on the motor winding and to reduce discharge current to PE with long motor cables. Motor filters ensure reliable drive operations with up to 100m of shielded or 200m of unshielded motor cable.

- ▶ The voltage drop on the motor filter with a filter rated current and a frequency of 50Hz is typically around 3% of the max. output voltage of the inverter. Observe the operating conditions of the motor filter .

Motor filter

A motor filter is needed:

- ▶ as of 50m of shielded or 100m of unshielded motor cable (regardless of observance of EMC requirements)
- ▶ When using unshielded motor cables, compliance with EMC only applies with regard to cable-linked interference emissions.
- ▶ The following assignment applies to operation with rated power.

Motor power	Mains voltage	Product key		Motor filter data			
(asynchronous motor, 4-pole)		Inverter	Motor filter	Rated current	Voltage drop	Required for motor cable lengths equal to and greater than	Max. motor cable length
P_N [kW]	U_{Netz} [V]			I_N [A]	[%]	l [m]	l [m]

Keypad XT

The keypad is provided to visualise the operating parameters and set parameters for the inverter. The keypad is plugged onto the front of the inverter and is also used for the status display, error diagnosis and, with integrated memory, to transfer parameters to other inverters.

Keypad XT

As an alternative, the diagnosis terminal with integrated XT keypad is available for visualising the operating parameters and inverter parameter setting

Design	Features	Slot	Product key
Keypads and accessories			
Keypad XT	<ul style="list-style-type: none"> ▶ Password protection ▶ Plain text display ▶ Predefined basic configurations ▶ User-specific menus ▶ Suitable for the 8200 vector and 9300 inverters series ▶ IP20 degree of protection 	AIF	EMZ9371BC

8200 motec frequency inverter

Product information

8200 motec – for distributed drive tasks

Lenze frequency inverters are used in a large number of sectors and applications for electronically adjusting the speed of three-phase asynchronous motors. We offer uniform standard products with flexible scope for use, quick and easy commissioning, reliability and of course high quality.

8200 motec is a robust frequency inverter with a high degree of protection for the 0.25 ... 7.5 kW power range which is ideal for distributed drive tasks.

For example it can be fitted near the motor on the machine frame to offer optimum access in any mounting position. The power supply is disconnected from the drive electronics using plug-in contacts. In the event of service all you need do is loosen four screws to replace the heatsink and all electronics. Integrable function modules allow the 8200 motec to be incorporated in the control and automation set-up of your machine or plant with a precise fit.

The 8200 motec is related to the "control cabinet frequency inverter" 8200 vector offering the same function. Operation, diagnostics, functionality and drive behaviour are all the same which offers benefits in combined central/distributed concepts. The device is either operated via the XT keypad operating module or via a PC together with the convenient and free of charge GDCEasy operating software.

Very simple retrofitting

Other than the mains supply, no extra control voltage is needed to operate the 8200 motec, allowing what have previously been uncontrolled systems to be retrofitted at little cost for the purpose of process optimisation.

Adaptable

The selectable form of the V/f characteristic allows the frequency inverters to be adapted to loads with torque requirements rising in a constant or quadratic manner. The integrated flying restart circuit means that a drive can be easily restarted when the shaft is still turning.

Energy-saving

The power level is adapted such that the inverter is only driven to suit the current demand for torque/power.

Immediately ready for operation

The frequency inverters are preset for standard use. Amongst other things, parameters are set for:

- ▶ controlled acceleration and deceleration using set acceleration and deceleration times
- ▶ assignment of inputs and outputs with standard functions

Clear

The XT keypad is also available for operation. Users can quickly access all inverter parameters in the clear menu structure using the 8 keys and a text display. The XT keypad is also used for status display, error diagnosis and, thanks to its integrated memory, for transferring settings to other inverters.

8200 motec – for distributed drive tasks

The right setpoint source for every requirement

- ▶ via setpoint potentiometer to the control terminals
- ▶ via master voltage or master current to the control terminals
- ▶ via digital frequency input
- ▶ via an operator module
- ▶ via a bus module from a host system

Reliable

An adjustable slip compensation balances load-related speed variations without costly speed feedback. The maximum current limiting function ensures stable operation in all operating points under static and dynamic loads. A PTC thermistor can be connected to protect the motor.

Communication-capable

In communication with a host system, inverters can be incorporated using plug-on bus modules. Virtually all common field bus systems are available (CAN, CANopen, PROFIBUS, INTERBUS, DeviceNet, AS interface and ETHERNET Powerlink).

Used around the world

Thanks to the huge mains voltage range of up to 500 V (+10%), you don't need to worry about where in the world your machine is supplied. And the 8200 vector series is of course certified in line with international standards.

8200 motec frequency inverter

Product information

Functions and features

Control modes/motor control	V/f control (linear or quadratic) Zero-sensor vector control
Basic functions	Freely assignable user menu 4 freely programmable parameter sets (can be swapped over online) Fault history buffer DC brake function Flying restart with coasting motor S-ramps for smooth acceleration Max. output frequency 650 Hz Fixed frequencies Masking frequencies PID controller Freely configurable inputs and outputs Level inversion
Monitoring and protective measures	Short circuit Earth fault Overvoltage Motor stalling Motor phase failure detection Load rejection/V-belt monitoring I ² x t-Motor monitoring Motor overtemperature (input for PTC or thermal contact)
Diagnostics Status displays	2 LEDs
Braking operation Brake chopper Brake resistance	Integrated External

Control connections

The 8200 motec receives digital and analogue inputs and outputs through an I/O function module. These are used to control the inverter and/or incorporate it in automation and control concepts.

Communication with a host system can be established and matched to the application using a plug-in communication module as an extra or alternative. This ensures great flexibility for various drive and automation tasks.

You can select from three different I/O modules:

- ▶ standard I/O for standard applications
- ▶ application I/O for challenging applications
- ▶ bus I/O for bus and I/O mixed operation (a bus function module is also needed)

The function modules are integrated in the 8200 motec carrier housing.

Brake choppers and brake resistors

An external brake resistor is needed to decelerate larger moments of inertia or in the event of longer operations in generator mode. It converts braking energy into heat.

The brake resistors recommended in the table are designed for around 1.5 times the regenerative power for a cycle time of 15/135 s (brake/pause). The brake resistors are fitted with a thermostat (potential-free NC contact).

Brake resistance ERBS... (IP65)

Wiring terminals

Wiring terminals allow mains or control cables to be looped through and wired in the carrier housing of the 8200 motec. A "power bus" can be set up in conjunction with the mains bus connectors.

System terminals are perfect for connecting and wiring control cables.

▶ 3 ... 7.5 kW:

When using standard twin wire end ferrules, mains cables of up to 4mm² can be rounded in the motec carrier housing.

Wiring terminals E82ZWKN4 and E82ZWKN2

Design	Product key

Switch/potentiometer unit

The switch/potentiometer unit is fitted on the 8200 motec itself or at another location in the plant. Using the switch/potentiometer unit and an I/O function module (standard I/O, application I/O, bus I/O) an analogue setpoint can be selected for the inverter with the integrated potentiometer; the rotary switch can be used to e.g. start or stop the drive or change the direction of rotation.

The switch/potentiometer unit is supplied with a 2.5 m connecting cable and fixings for mounting on the 8200 motec heatsink.

Switch/potentiometer unit

Switch unit

The switch unit is fitted in an M20 cable gland of the 8200 motec. A digital input can be used to e.g. start or stop the drive.

Switch unit

Design	Product key
Switch unit (IP55)	E82ZBS020

Fan module

The fan module is provided for 8200 motec in the power range 3.0 ... 7.5kW and contains an electronic fan which is powered by the 8200 motec.

The fan module is needed when the

- ▶ 8200 motec is wall-mounted
- ▶ when using motors or geared motors which were not produced by Lenze.
- ▶ when using self-ventilated Lenze motors or geared motors which operate without reducing the rated output current.

Fan module

Design	Product key
Fan module (IP 54)	E82ZMV

Adapter plate

Adapter plates are available for fitting the 8200 motec on motors whose drilling pattern does not match the Lenze standard. The plates should be drilled by the user as required for the motor awaiting adaptation.

Adaptor plate

Design	Product key
Adapter plate 0.25 ... 0.37 kW	EJ0048
Adapter plate 0.55 ... 2.2 kW	EJ0047
Adapter plate 3.0 ... 7.5 kW	EJ0050

Overview of modules

The inverters have a slot for a module. The slot is inside the motec. Depending on application, it should be equipped with a corresponding module.

An extra bus function module can be used when using the bus I/O. The table below describes the modules available for this slot.

Design	Features	Slot	Product key
Function module			
Standard I/O	 <ul style="list-style-type: none"> ▶ 5 digital inputs ▶ 1 digital output ▶ 1 analog input ▶ 1 analog output ▶ Coated design for operation in industrial environments 	FIF	E82ZAFSC001

Selection and order data

The "Global Drive Control" (GDC) PC program is a clear tool which is easy to understand. It is used for the operation, parameter setting, configuration and diagnostics of many Lenze drives and automation devices.

Advantages at a glance:

- ▶ quick and easy drive commissioning via short set-up
- ▶ intuitive operation even for inexperienced users
- ▶ extensive Help functions
- ▶ convenient diagnostics options using various monitor windows and oscilloscope functions make external measuring instruments superfluous
- ▶ the function blocks can be interconnected without any knowledge of how to program using the function block editor

User interfaces of Global Drive Control

Design	Features	Product key
Global Drive Control "easy", freeware	<ul style="list-style-type: none"> ▶ Order free of charge ▶ Download via the Internet ▶ Includes GD Loader ▶ Languages: German/English 	Download free of charge
GDC starter package	<ul style="list-style-type: none"> ▶ Includes: <ul style="list-style-type: none"> - Global Drive Control, single user licence - USB system bus adapter 	ESP-GDC-2S
Global Drive Control, single user licence	<ul style="list-style-type: none"> ▶ CD-ROM included in scope of supply ▶ Installation on one PC ▶ Includes GD Loader and GD Oscilloscope ▶ Languages: German/English 	ESP-GDC2
Global Drive Control, multiple user licence	<ul style="list-style-type: none"> ▶ CD-ROM not included in scope of supply ▶ Multiple installations on the number of machines for which licences have been purchased ▶ The basis is a single user licence 	ESPMGDC2
Global Drive Control, corporate licence	<ul style="list-style-type: none"> ▶ CD-ROM not included in scope of supply ▶ Multiple installations within a company at one location ▶ The basis is a single user licence 	ESPPGDC2
Global Drive Control, buyout licence	<ul style="list-style-type: none"> ▶ CD-ROM not included in scope of supply ▶ Multiple installations within a company at one location ▶ Issuing of sublicences in conjunction with Lenze drives installed in a machine ▶ The basis is a single user licence 	ESPBGDC2

Engineering software Global Drive Control

Functions and features

The following table describes functions and features of the engineering software.

Since not all functions can be accessed by every drive, the engineering software appears differently, depending on the selected drive.

Product key Short form	ESP □ GDC2	
Design	GDC easy	GDC
Code list, access to all parameters		
STARTTEC	•	•
8200 vector / 8200 motec	•	•
9300 vector	•	•
9300 servo inverter	•	•
Drive PLC	•	•
9300 Servo PLC	•	•
ECS axis and power supply module	•	•
I/O system IP20	•	•
EthernetCAN	•	•
ModemCAN	•	•
Function block editor		
8200 vector / 8200 motec		•
9300 vector		•
9300 servo inverter		•
ECSxS (Speed & Torque)		•
Short setup dialogs		
STARTTEC	•	•
8200 vector / 8200 motec	•	•
9300 vector	•	•
9300 servo inverter		•
ECSxx		•
Assisted setup		
8200 vector / 8200 motec	•	•
Diagnostics		
Monitor window	•	•
Input / output diagnostics		
8200 vector / 8200 motec	•	•
Oscilloscope function		
9300 vector		•
9300 servo inverter		•
ECSxx		•
Additional integrated software		
Global Drive Oscilloscope		•
Global Drive Loader	•	•

Data access/communication

The following table describes the communication paths of the engineering software to the connected drives. Some drives do not support all communication paths, so that some communication paths may not be possible.

Product key Short form		ESP□GDC2
Design	GDC easy	GDC
Version Latest software version	V4.10	
Communication		
System bus (CAN)	<ul style="list-style-type: none"> ▶ USB connection with USB system bus adapter EMF 2177IB¹⁾ ▶ Parallel interface with system bus adapter EMF 2173IB 	
LECOM	<ul style="list-style-type: none"> ▶ RS485 with interface converter (LECOM B)²⁾ ▶ Optical fibre via RS232 converter of PC (LECOM LI) ▶ RS232 (LECOM A) 	
OPC Drive Server	<ul style="list-style-type: none"> ▶ Via all connections defined on the OPC Drive Server (bus server) 	

¹⁾ Not valid for Windows NT®. This operating system does not support the USB port.

²⁾ Possible using one of the intelligent interface converters freely available on the market (not supplied by Lenze).

System requirements

To be able to use Global Drive Control, the following minimum hardware and software requirements must be met:

- ▶ Microsoft®Windows® 98/Me, Windows NT® 4.0 SP5 or higher or Windows 2000 SP2/XP or higher
- ▶ IBM compatible PC with Intel® Pentium® processor 333 MHz or higher
- ▶ At least 128 MB RAM
- ▶ At least 250 MB free hard disk space
- ▶ At least 1024 x 768 pixels screen resolution with 256 colours
- ▶ Mouse
- ▶ CD-ROM drive
- ▶ Internet Explorer Version 5 or higher
- ▶ Free slots/interfaces in accordance with the requirements of the individual fieldbus interface modules

It's good to know | why we are there for you

"Our customers come first. Customer satisfaction is what motivates us. By thinking in terms of how we can add value for our customers we can increase productivity through reliability."

"The world is our marketplace. We develop and manufacture internationally. Wherever you are in the world, we are nearby."

"We will provide you with exactly what you need – perfectly co-ordinated products and solutions with the right functions for your machines and installations. That is what we mean by 'quality'."

"Take advantage of our wealth of expertise. For more than 60 years now we have been gathering experience in various fields and implementing it consistently and rigorously in our products, motion functions and pre-configured solutions for industry."

"We identify with your targets and strive towards a long-term partnership which benefits both sides. Our competent support and consultation process means that we can provide you with tailor-made solutions. We are there for you and can offer assistance in all of the key processes."

You can rely on our service. Expert advice is available 24 hours a day, 365 days a year, in more than 30 countries via our international helpline: 008000 24 Hours (008000 2446877).
